

Elegia: the first high-end closed-back headphones by Focal

After Elear and Utopia in 2016, then Clear in 2017 - its three leading open-back headphones - Focal set itself a new challenge: to integrate the best of its technologies into a set of high-end closed-back headphones to experience absolute sound everywhere and anywhere. Mission accomplished.

EXPERIENCE MUSIC EVERYWHERE

With Elear, Clear and Utopia, Focal made a grand, and not unnoticed, entrance into the high-end open-back headphones market. But that was only the beginning of the story...

Integrating speaker drivers into closed-back headphones, without making any concessions on the reproduction of the lowest frequencies: that is the new chapter in the Focal story that the engineers have just finished writing by creating Elegia.

Focal invites audiophiles to make a date with absolute sound whenever and wherever they want, to dive into an intimate sound bubble, without worrying that a noisy environment is going to interfere with this moment of pure pleasure.

INNOVATION AT THE SERVICE OF SOUND AND MOBILITY

In Elegia, Focal has brought together the best of its technologies, skilfully designed, developed and assembled in its workshops in France. These unprecedented headphones incorporate a new generation of exclusive full-range speaker drivers capable of operating in a small inner environment whilst ensuring exceptional dynamics and the most precise sound reproduction: whether it's the motor, the frameless copper voice coil, the dedicated surround or the "M"-shape dome, these speaker drivers are a mass of innovation devoted to sound purity.

Designed for use with portable audio players, Elegia delivers excellent performance.

The French manufacturer's forty years of expertise has also resulted in specific work on the vents to ensure that zero resonance disturbs the listening experience. As such, Elegia's soundproofing is excellent, helped along by the earpads. The realism and naturalness of the diffused sound is striking from the very first seconds of listening, whether that's at home or outdoors, using the jack adapter and the cable with jack connector provided with the headphones.

"FASHIONS FADE. STYLE NEVER DOES"

Focal doesn't just create high-performance acoustic solutions. The brand goes «beyond»: it creates designer objects and champions a way of life. The choice of noble materials, such as leather, microfibre, solid aluminium, etc., gives Elegia style, sophistication and timelessness.

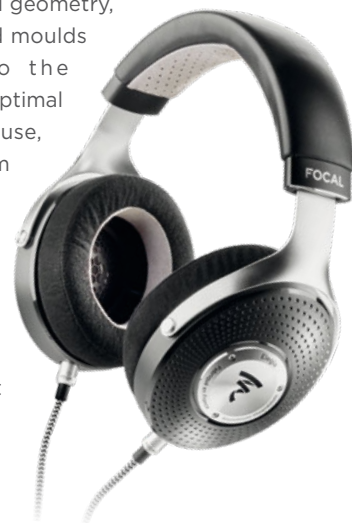

Absolute comfort is yet another asset on the list, too: with its well-mastered geometry, the headband moulds perfectly to the

head, providing optimal grip for on-the-go use,

and the memory foam

microfibre earpads are soft

and comfortable on the ears. And because Focal oversees the quality of every detail, a carefully finished, perfectly-sized case is also supplied. Its thermoformed construction lets you store, protect and carry Elegia wherever you go.

Available: October 2018
